Internships in RIKEN BSI Summer Program:  
Science Communication and Administration

Mentor  
Charles Yokoyama, Ph.D.  
Director for Research Administration  
RIKEN Brain Science Institute

Overview  
Scientific communication and administration represent important and fulfilling alternate careers or as skillsets complementary to research activities. The BSI Director’s Office is offering summer internships in the areas outlined below.

Science Writing and Communication  
Communicating science to society is essential for public support of research and to attract the next generation of scientists. You will work on the frontiers of science communication in projects involving writing articles, blogging, and multimedia.

Manuscript Assessment and Editing  
Manuscript construction and editing are an essential part of a scientist’s skillset. Learn conceptual scientific assessment and editing from a former Senior Editor of Neuron and exposure to current and future frontiers in research publishing.

Research Administration and Policy  
Administration of a research institute or university can be a rewarding career that involves communication and management skills, and the ability to develop policy for organizations. Learn how the many facets of research administration interconnect.
